# SOM Documentation

*Release 1.0.0*

Guilherme Neri

Nov 07, 2023

# Contents:

<b>1</b>	<b>kohonen</b>	<b>1</b>
1.1	main module . . . . .	1
1.2	som package . . . . .	1
<b>2</b>	<b>Indices and tables</b>	<b>3</b>
	<b>Python Module Index</b>	<b>5</b>

# Chapter 1

## kohonen

### 1.1 main module

<https://github.com/sagnb/OCA>

`main.args()`

Return args

**Return arguments passed to the program**

`argparse.Namespace`

### 1.2 som package

#### 1.2.1 Submodules

#### 1.2.2 som.kohonen module

Kohonen Map or SOM(Self Organizing Maps)

`class som.kohonen.SOM(input_matrix: ndarray, start_point: ndarray, end_point: ndarray)`

Bases: object

Self Organizing Maps

`find_winner(seed: ndarray)`

Find winner in neurons vector

**Parameters**

`seed` – numpy.ndarray

`fit(max_time: int, max_sigma: float)`

Adjust neuron weights

**Parameters**

- `max_time` – int
- `max_sigma` – float

`plot_path()`

Plot the fit path using matplotlib

`som.kohonen.dissimilarity(a: ndarray, b: ndarray, p: int = 2) → float64`

Return the dissimilarity between a and b

**Parameters**

- `a` – numpy.ndarray
- `b` – numpy.ndarray

**Return dissimilarity**

numpy.float64

som.kohonen.gaussian(*current\_index: int, winner\_index: int, current\_time: int, max\_time: int, max\_sigma: float*) → float

Returns the result of the Gaussian function taking into account the topology of the winning neuron and the neuron currently being recalculated

**Parameters**

- *current\_index* – int
- *winner\_index* – int
- *current\_time* – int
- *max\_time* – int
- *max\_sigma* – float

**Return Gaussian value**

float

som.kohonen.vet(*a: ndarray, b: ndarray*) → ndarray

Generates vector between a and b

**Parameters**

- *a* – numpy.ndarray
- *b* – numpy.ndarray

**Return vector**

numpy.ndarray

### 1.2.3 Module contents

## Chapter 2

# Indices and tables

- `genindex`
- `modindex`
- `search`

# Python Module Index

## m

[main](#), 1

## s

[som](#), 2

[som.kohonen](#), 1

# Index

## A

`args()` (*in module main*), 1

## D

`dissimilarity()` (*in module som.kohonen*), 1

## F

`find_winner()` (*som.kohonen.SOM method*), 1

`fit()` (*som.kohonen.SOM method*), 1

## G

`gaussian()` (*in module som.kohonen*), 2

## M

`main`

module, 1

`module`

main, 1

som, 2

som.kohonen, 1

## P

`plot_path()` (*som.kohonen.SOM method*), 1

## S

`som`

module, 2

`SOM` (*class in som.kohonen*), 1

`som.kohonen`

module, 1

## V

`vet()` (*in module som.kohonen*), 2
